Court Management Design – Solution Architecture

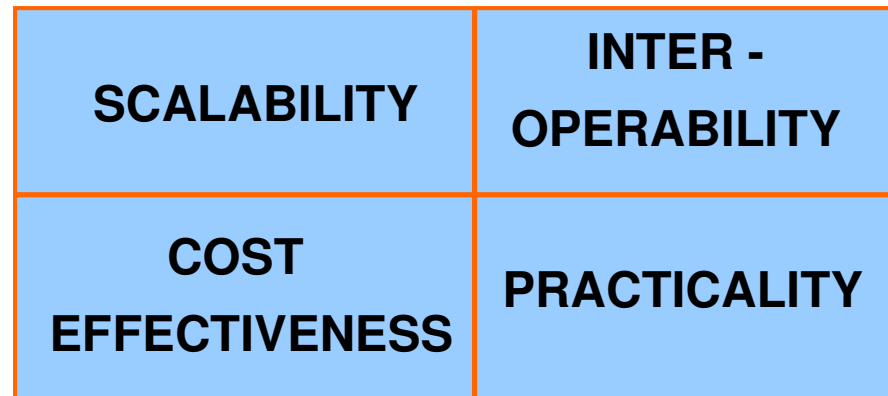

Court Management Design - Technical Consideration

- Changing court processes and procedures
- Extending coverage beyond Pilot to other courts
- Designed to handle increasing transaction load

- Open Architecture facilitates integration
- Deploy industry standards
- Incorporate Security
- Provision for Data Warehousing capabilities
- Provision for touch-points to external users

Dynamically **Adapt** and **Scale** to meet changing requirements over time

Efficient and reduced **Total Cost of Ownership**

Flexible and **Adaptable** to work with various applications

Easy to **Configure**, **Deploy** and **Manage**

- Open Architecture & Standards
- Use of J2EE and Web services for application integration
- Enterprise Systems and Network Management framework
- Use of industry standard hardware platform
- Providing source code ownership
- Deployment of Helpdesk

- Deployment of configurable solution components
- Enterprise Management framework built-in
- Built-in systems redundancy
- High availability design for infrastructure
- Intrusion detection for security
- Application caters for both centralised/de-centralised deployment
